1.

This responds to the communication of May 14, 2001. The restriction requirement of record between Groups I and II is maintained as stated below. The objection to the abstract of the disclosure and the rejection under 35 USC 112, second paragraph, both of record, are withdrawn in view of applicants' amendments. The rejection of record under 35 USC 103(a) is withdrawn in view of applicants' arguments. A new rejection of claims 1-15 under 35 USC 103(a) is given as stated below. No claim is allowed.

2.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3.

Applicant's election with traverse of Group I, claims 1-15 in Paper No. 5 is acknowledged. The traversal is on the ground that claim 16 is a product prepared by the process of claim 1, i.e. a product by process claim. This is not found persuasive because it is well settled that the patentability of a product rests with the actual product formed as opposed to the method by which it is formed and that applicant has the burden of establishing an unobvious difference over the reference product. *In re Marosi*, 218 USPQ 289; *In re Thorpe*, 227 USPQ 964.

The requirement is still deemed proper and is therefore made FINAL.

4.

This application contains claims 16 - 18 drawn to an invention nonelected with traverse

Art Unit: 1713

in Paper No. 5. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144). See MPEP § 821.01.

5.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Timm, US 4,444,961, and Klipper et al., US 4,952,608, and Corte et al., US 3,006,866, hereinafter Corte '866.

The claimed process is a compilation of generally known steps. Timm for example as acknowledged at page 3, lines 13-17 of applicant's disclosure teaches instant step (a), viz. the method for a monodisperse crosslinked vinylaromatic base polymer. Klipper teaches the amidomethylation and conversion to an aminomethylated bead polymer of instant steps (b) and (c) including the instant embodiments of a phthalimide ether and sulfuric acid catalysis [column 1, lines 27-54; column 3, line 18 - column 4, line 5; claims 3,5,6 and 7]. Corte '866 teaches introducing aminoalkyl groups via chloromethyl phthalimide and subsequent alkylation to form weak or strong anion exchangers, i.e. instant step (d) [paragraph bridging columns 1 and 2; column 3, line 43 - column 4, line 2]. It would have been obvious to prepare anion exchangers according to instant steps (a) to (d) because ^{TIMM}Meitzner and Klipper and Corte '866 teach each step of the process. 78

6.

Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground of rejection.
